1. Project Environment Setup

GitHub repository link: <https://github.com/Castor909/projecte-intermodular>

Trello Board link: <https://trello.com/b/DAdSBPs/projecte-intermodular>

Structure:

- **Backlog:** Contains all user stories and technical tasks (derived from the Sprint Planning).
- **Doing:** Tasks currently being developed.
- **Done:** Completed and tested features.

Initial Tasks: The backlog has been populated with the initial requirements, including database setup, routing, and wallet integration.

2. Initial Design & Wireframes

Visual Identity (Look & Feel)

Style: Retro/Vintage Aesthetic.

Color Palette: We will use "Warm" tones to reflect the analog nature of vinyl records.

- *Background:* Cream / Off-white (like old paper).
- *Text:* Dark Brown (instead of harsh black).
- *Accents:* Burnt Orange (for buttons and notifications).

Typography: *Playfair Display* to mimic typewriter text or classic album liner notes.

Wireframes Description

1. Home Page

- **Header:** Features the brand name "**VinylEth**" on the left and a navigation menu (Catalog, About, Contact). A prominent orange "**Connect wallet**" button is positioned on the right for Web3 authentication.
- **Hero Section:** Highlights the "Album of the week" and "Best seller of the month" with placeholders for the artist and album names alongside a large cover image.
- **New Arrivals:** A grid layout displaying recent additions. Each item includes a cover placeholder, the price in ETH, and a dedicated "**View**" button to access details.

2. Product Page

- **Left Column:** Displays the large album artwork. Below the image, there is an **audio player** (play icon and progress bar) for previewing tracks. The price (e.g., 0.04 ETH) and the **"Add to cart"** button are also located here for quick access.
- **Center/Right:** Contains the album metadata (Album name, Artist, Year, Description) and a clear **Tracklist** on the right side, mimicking the back cover of a vinyl record.

3. Checkout

- **Order Summary:** A clear table listing the "Product" (with thumbnail and details), "Quantity", and "Sub total". The final **Total** is calculated in ETH at the bottom.
- **Shipping Address:** Simple input fields for **Address**, **City**, and **Email** to arrange physical delivery.
- **Payment:** Clearly indicates "Payment method: Ethereum" and features a large call-to-action button: "**Confirm transaction**" to trigger the blockchain payment.
-
- **Summary:** Subtotal, Shipping Cost (calculated based on address), and Total in ETH.
- **Payment Action:** A distinct section for the **Ethereum Payment**. It shows the specific amount to send and the wallet address (or a "Pay with MetaMask" button).
- **Shipping Form:** Minimalist fields for the physical delivery address.
